

# THE AGGRESSOR

## FIELD TRIAL REPORT

This Aggressor trial was undertaken at Hidden Creek C.C. in Reston, Virginia on July 9, 2012. The superintendent reported severe localized dry spot and high bicarbonate PPM levels on several green profiles. The 5th green exhibited several dry spots that were "powder dry" and would not hydrate.

A 5:1 ratio of pHAcid Sprayable(1 quart per acre) and Revert Soil Water Repellent Management System (6oz. per 1000 ft<sup>2</sup>) was applied to a test green using The Aggressor, an applicator specifically designed to apply both products in an aggressive treatment to reduce LDS conditions and soil salts in greens and tees. Temperatures at time of application were near 100 degrees. Demo was completed by Tom Walsh.

Pictures 1a and 2a show untreated area across the 5th green at Hidden Creek CC where the Aggressor treatment was applied. The superintendent noted that during the application there appeared to be "bubbles" all over the green and "it looked like it was alive." "Bubbles" are common after application and represent solubilization and flushing of calcium carbonate from the soil profile. The superintendent also indicated that he observed improvement the day following application.

Pictures 1b and 2b were taken 7 days following treatment (July 16, 2012) and show the response to treatment.

## Aggressive Reduction of LDS Conditions and Soil Salts

**Finally, there is a way to easily apply an aggressive treatment strategy.**

**Introducing...*The Aggressor!***

The Aggressor gives your turf manager the ability to:

- **Aggressively treat specific areas for localized dry spot and soil salts.**
- **Safely and aggressively apply:**
  - » Revert™
  - » pHAcid™ Sprayable via handsyringing and spray applications

The Aggressor is the first soil treatment strategy for the reduction of soil salts and water repellency.

The Aggressor also provides enough water to create a flushing event while applying Revert and pHAcid Sprayable.

**Get aggressive with your turf management.
